Each extraction tool is designed to extract individual DEUTSCH solid and stamped and formed (S&F) pin and socket contacts from rear-release connectors. Features of the tool are given in Figure 1.

## 1. USING THE TOOL

- 1. From the rear of the connector, align the tool tip with the contact cavity of the contact to be removed. Place the wire of the contact over the tool wire entry slot and apply light pressure on the wire until it enters the wire entry slot. See Figure 2, Detail A.
- 2. Slide the tool along the wire and into the contact cavity until the tool tip engages the contact and resistance is felt. See Figure 2, Detail A.

#### CAUTION

Do not twist or insert the extraction tool at an angle; otherwise, damage to the cavity retention finger(s) will result.

3. Gently pull the tool with the wire until the contact is removed. See Figure 2, Detail B.
